

— HOUSTON, TEXAS

Company Profile

Energy commodity trading and brokerage for crude oil, refined products and gas.

ABOUT US

About Yorkwell Petroleum

Yorkwell Petroleum is an energy commodity trading and brokerage company based in Houston, Texas. We connect qualified buyers and sellers of crude oil, refined products and gas.

What we do

We work on the commercial side of a physical trade: finding the counterparty, agreeing the terms, and coordinating the finance, storage and logistics and quality checks the cargo depends on.

Our product range covers diesel, jet fuel, gasoline, fuel oil, marine gas oil, LNG, LPG and crude oil. Each product is traded against a named specification and written delivery terms.

How we work

Yorkwell works through partners. We do not own refineries, terminals, pipelines or vessels, and we do not describe our partners' assets as our own.

A physical oil trade involves several independent companies, and each one has to be able to rely on the others. So every party to a trade carries out its own due diligence, and we expect to be checked in the same way. The company record at the end of this profile gives you what you need to start.

Leonard Scott

CHIEF EXECUTIVE OFFICER

Yorkwell Petroleum is led by Leonard Scott, its Chief Executive Officer.

Questions we are asked

Is Yorkwell a producer or a refiner?

No. Yorkwell is a trading and brokerage company. It does not own or operate production, refining, storage or shipping assets.

How can I verify the company?

The company record at the end of this profile gives the legal name, formation date and Texas filing number. These can be checked with the Texas Secretary of State and the Texas Comptroller of Public Accounts.

How do I start working with Yorkwell?

Send an inquiry with the product, quantity, specification, destination and timing using the contact details at the end of this profile. We reply in writing.

2025 FORMED	Houston, Texas HEAD OFFICE	10 PRODUCTS TRADED	4 SERVICE LINES
-----------------------	--------------------------------------	------------------------------	---------------------------

WHAT WE DO

Energy commodity trading, and the services a trade needs around it.

A cargo moves only when the counterparties, the money, the storage and the quality evidence all line up. Yorkwell works on each of the four.

Brokerage Services

We connect qualified buyers and sellers and keep the negotiation structured. Each party keeps its own due diligence and approvals.

Trade Finance

We work with banks and counterparties on the payment structures and documents a trade needs. The institutions involved set the financing terms.

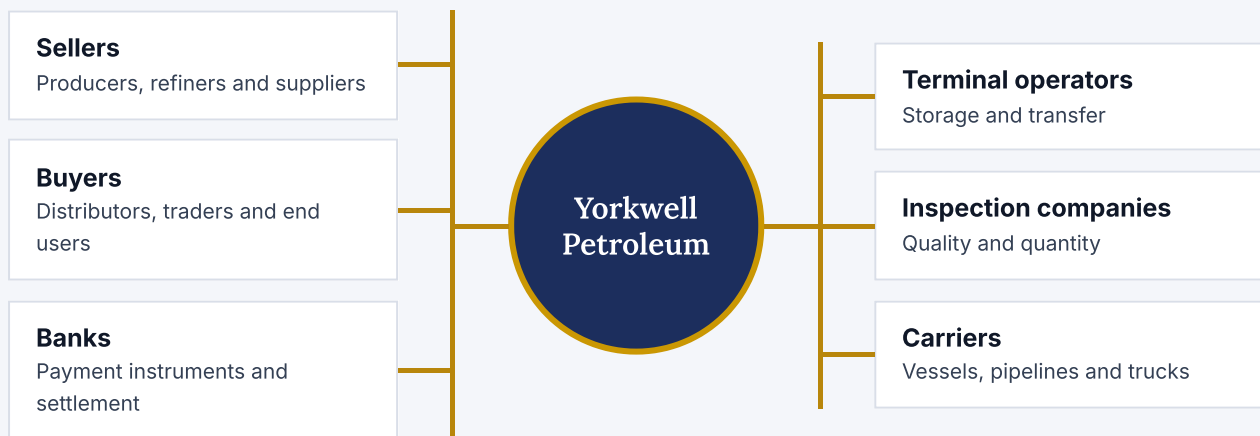

Storage & Logistics

We arrange storage and movement through third-party terminal operators. We do not own the terminals, and we say so.

Quality Assurance

We review specifications, certificates and inspection records before a trade proceeds, and coordinate independent inspection where a contract requires it.

Where Yorkwell sits in a trade

Each party contracts in its own name. Yorkwell coordinates the commercial steps between them.

Yorkwell Petroleum is not a bank and does not lend money. Any financing is provided by a financial institution, on that institution's terms and after its own approvals.

WHAT WE TRADE

Crude oil, refined products and gas.

Petroleum products are sold by specification. A buyer of diesel is buying a product that meets EN 590, and a buyer of jet fuel is buying one that meets the aviation standard named in the contract. The specification for each product is listed in the table.

PRODUCT	DESCRIPTION	SPECIFICATION
Diesel EN590 10ppm	Ultra-low-sulfur diesel to the European EN 590 standard, with a maximum of 10 ppm sulfur.	Standard EN 590. Sulfur 10 mg/kg maximum.
Diesel Gas Oil 50ppm	Gas oil with a maximum sulfur content of 50 ppm.	Sulfur 50 ppm maximum. Other properties as agreed in the contract.
Jet Fuel A1	Aviation turbine fuel for civil jet aircraft.	As named in the contract, commonly ASTM D1655 or DEF STAN 91-091.
Gasoline RON 98	Gasoline with a research octane number of 98.	RON 98 minimum. Other properties as agreed in the contract.
Gasoline RON 95	Gasoline with a research octane number of 95.	RON 95 minimum. Other properties as agreed in the contract.
Gasoline RON 92	Gasoline with a research octane number of 92.	RON 92 minimum. Other properties as agreed in the contract.
Virgin Fuel Oil D6	Residual fuel oil for marine and industrial use.	Viscosity, sulfur and density as agreed in the contract.
LNG / LPG	Liquefied natural gas and liquefied petroleum gas.	Composition and delivery method as agreed in the contract.
Crude Oil	Crude oil, by grade and origin.	Grade, origin, API gravity and sulfur content as agreed in the contract.
Marine Gas Oil	Distillate marine fuel for ship engines.	As named in the contract, commonly ISO 8217 grade DMA.

Supply is subject to availability, specification and contract terms. Grade standards and delivery terms are confirmed in writing for each trade.

HOW A TRADE WORKS

A structured process from first inquiry to execution.

1

Requirement

We establish the commodity, quantity, specification, destination and timing.

2

Review

We review the product information, specifications and documents available for the trade.

3

Coordination

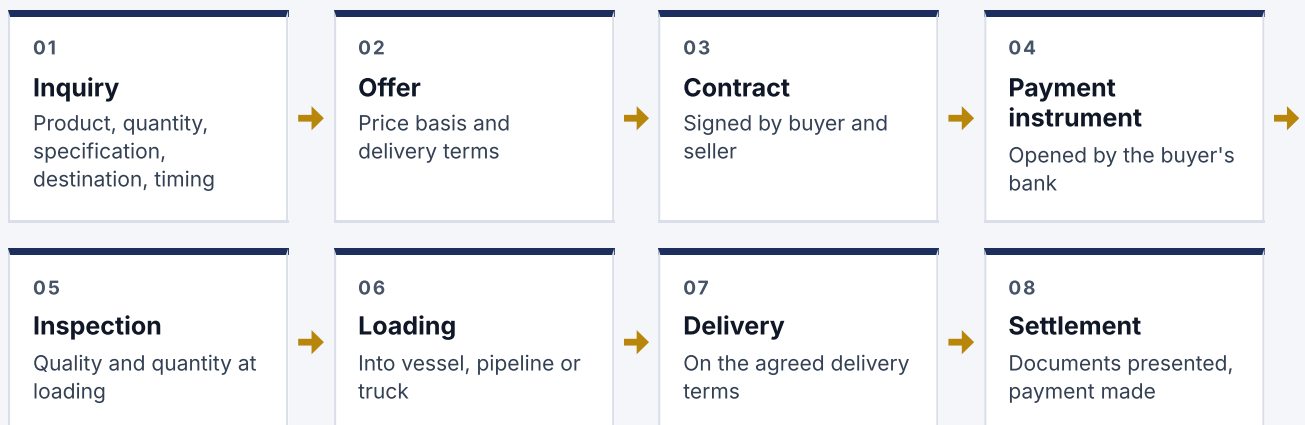

We coordinate communication between the parties until the terms are clear to both.

4

Execution

The trade proceeds under the agreed terms, documents and controls.

The life of a trade

The order of steps can change with the delivery terms and payment method agreed in the contract.

Delivery terms

Delivery terms decide where risk and cost pass from seller to buyer. They follow Incoterms such as FOB, CIF or DAP, as agreed in the contract.

The terms also settle who arranges the vessel or truck, who insures the cargo and where the product is inspected. We set these out in writing before a contract is signed.

What we check

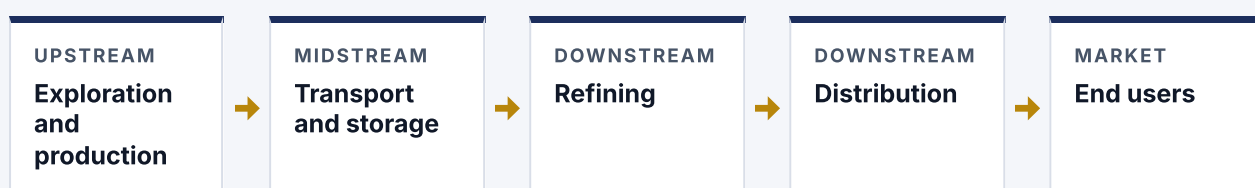

- The specification named in the contract
- Certificates of quality and quantity
- Inspection and laboratory reports
- That the documents agree with each other and with the contract

OUR OPERATIONS

Across the value chain, through partners.

Yorkwell works with producers, infrastructure operators and refiners in each part of the oil and gas value chain. We do not own the assets involved.

The oil and gas value chain

Yorkwell works on the commercial links between these stages. The assets belong to their operators.

Upstream Operations

Upstream is where oil and gas are found and produced. Yorkwell Petroleum takes part through commercial relationships with producers and operating partners. We do not own or operate wells, fields or production facilities. Our work is commercial: understanding what a producer has available, what a buyer needs, and whether the two can be matched on specification, volume and timing.

Midstream Operations

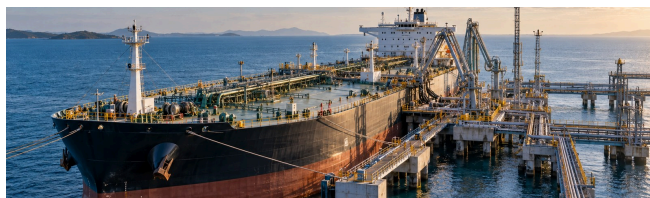

Midstream moves energy from where it is produced to where it is refined or sold. Yorkwell Petroleum coordinates that movement with the operators of the infrastructure. We do not own pipelines, terminals, tanks or vessels. We work with their operators to line up transport, storage and transfer for a trade.

Downstream Operations

Downstream turns crude oil into products and takes them to market. Yorkwell Petroleum works with refiners, suppliers and distributors to place refined products with buyers. We do not own or operate refineries. We source refined products from refiners and suppliers and match them with distributors and end buyers.

Offshore Operations

Offshore energy depends on marine logistics and precise timing. Yorkwell Petroleum coordinates the commercial side with specialist marine and offshore partners. We do not own platforms, vessels or offshore facilities. We connect offshore and marine requirements with partners who have the capability to meet them.

GOVERNANCE AND QUALITY

Governance

Governance at Yorkwell Petroleum means clear responsibility for every decision and honest dealing with every counterparty.

Integrity

We deal honestly and keep to professional standards in every relationship.

Transparency

We give counterparties clear and accurate information.

Compliance and responsibility

We conduct our business under the laws that apply to it, including sanctions and anti-money-laundering rules. We review the counterparties we deal with, and we expect them to review us.

Petroleum products are hazardous goods. Where we coordinate storage, transfer or transport, we work with operators who are responsible for the safety and environmental rules of their own facilities.

Accountability

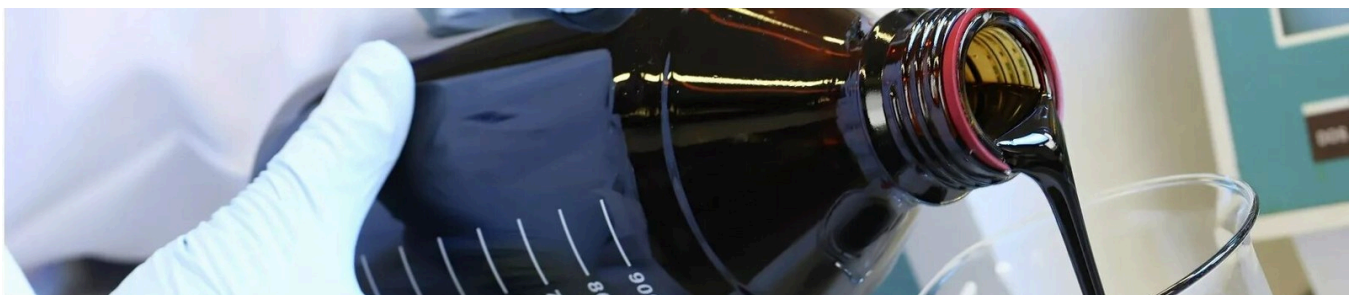

Each decision has an owner who answers for it.

Responsibility

We take account of the wider duties that come with working in the energy industry.

Common product standards

PRODUCT	STANDARD COMMONLY NAMED
Diesel	EN 590
Jet fuel	ASTM D1655 or DEF STAN 91-091
Gasoline	EN 228 or ASTM D4814
Marine fuels	ISO 8217
LPG	ASTM D1835 or EN 589
Crude oil	Assay for the grade and origin

COMPANY RECORD AND CONTACT

Work with Yorkwell Petroleum.

Tell us the product, quantity, destination and timing, and we will reply in writing.

Company record
